

About *Jett Sett* Basic™

Jett Sett Basic™ is a non-toxic easy-handling plastic that only needs hot water to become pliable, solidifies to your needs in minutes, and can be reused again and again.

It's easy to employ **Jett Sett Basic™** in your manufacturing operation. Use tools you already have on hand or obtain at low cost, like water heaters, glass or ceramic vessels, thermometer, and tongs if necessary. Staff can be trained in minutes.

Jett Sett Basic™ quickly solidifies without shrinking at room temperature, so you gain time in your process, and time savings are money savings.

While cooling, **Jett Sett Basic™** can be cut with a blade. Once hardened, it can be hammered without damage, painted, trimmed and filed with rotary tools. It even stands up to hydraulic press use in die forming!

The more you use **Jett Sett Basic™** in your manufacturing, the more uses you will find for it, and why not? Its uses are not limited to jewellery making.

The hardest thing about using **Jett Sett Basic™** will be keeping it in stock!

With **Jett Sett Basic™**, jewellers CAN:

- stop using shellac
- save cost by remelting and reusing
- operate safely--no open flame, solvents or toxic chemicals are involved
- cover sharp tool edges to save time by avoiding need to repair damage
- solidify faster with cold water
- mask pieces for sandblasting

Using **Jett Sett Basic™**, AVOID:

- open flame: it is flammable
- heating in microwave
- overheating (material loses qualities)
- leaving it in hot water long time
- PVC materials, as bonding occurs
- breathing dust when filing
- hot metals or use as a mold
